A Computer Science Graduate specializing in Core Computer Science, with a strong foundation in building projects in an end-to-end experience from planning, building, testing, and deployment using a variety of technical tools. Committed problem solver with a strong learning agility, dedicated to constant learning. Comfortable in collaborative environments and works cohesively with a team. Currently exploring various opportunities in the field of Computer Science.

EDUCATION

University of Santo Tomas

BS Computer Science, 2022–2026

- Best Thesis Award, Core Computer Science Track
- 2025-2026 1st and 2nd Term, Dean's List
- 2024-2025 1st Term, Dean's List
- 2023-2024 2nd Term, Dean's List
- 2022-2023 1st and 2nd Term, Dean's List

Senior High School, 2020-2022

- Science, Technology, Engineering, and Mathematics Track

EXPERIENCE

Exist Software Labs – Software Engineer Intern

January 2026 – August 2026

- Developed Tests and applied basic software development concepts under supervision
- Supported the team with documentation and minor technical tasks
- Observe, participate, and complete assigned learning and practice tasks

Pilvot Technologies (*Formerly “Kerno Technology”*) – Full-stack Developer

February 2026 – Present

- Freelance Technology startup established by UST Students developing software solutions.
- Led backend and frontend development of the LRAGMS.
- Designed and maintained APIs, database structures, and core application functionality.

ElevEight – Full-stack Developer

June 2024 – June 2025

- Software Engineering project team as part of UST's Software Engineering subject requirements.
- Developed a Grade Management System for Lorenzo Ruiz Academy (LRAGMS).
- Built both frontend and backend components, ensuring seamless data flow between systems.

ARC-HIVED – Backend Developer

December 2023 – August 2024

- Technology Startup established by FEU Students, developing AI and software Solutions.
- Aimed to develop a student-centric online shop for Far Eastern University.

- Managed database schemas and queries to ensure data consistency and efficient retrieval.

Freelance Unity Game Developer

December 2020 – Present

- Designed and developed complete game prototypes independently.
- Implemented core gameplay mechanics, UI systems, and basic animations and art.
- Strengthened debugging and problem-solving skills with repeated game jam participation.

SKILLS

TECHNICAL SKILLS

- Proficient in HTML, CSS, Vanilla JavaScript, and React for Frontend Web Development.
- Experienced in Flask, Node.js, Express, and Spring Boot for Backend Web Development.
- Proficient in C# and Unity for Game Development.
- Familiar with Flutter, Dart, and React Native for Mobile Development.
- Experienced in MongoDB, Firebase, and Supabase for Cloud Database Management.
- Familiar with Python libraries for Machine Learning Development.
- Background in AI and Machine Learning concepts, including model training and evaluation.
- Applied knowledge in GitHub and GitLab for version control and collaborative Development.
- Proficient in using Google Suites (Google Docs, Google Slides, Google Sheets).

SOFT SKILLS

- Learning agility shown by successfully navigating self-taught learning paths.
- Adaptability in rapidly evolving technological landscapes.
- Comfortable working in collaborative environments, working cohesively with a team.
- End-to-end experience planning, building, testing, and deploying solo projects.
- Skilled at breaking down complex problems and iterating toward solutions.
- Able to manage time effectively, set personal goals, and maintain consistency.

PROJECTS

Lorenzo Ruiz Academy Grade Management System V2

Backend Developer – Typescript, Express.js, Node.js, Supabase

- Revamped the previous LLAGMS using a PERN-based architecture.
- Improved overall system performance by optimizing both frontend and backend components, focusing on maintainability and scalability, and enhanced user experience with intuitive UI/UX.

Lorenzo Ruiz Academy Grade Management System

Backend Developer – Python, Flask, Firebase

- Developed a grade management system using Flask and Firebase.
- Enabled admins and instructors to efficiently manage student grades, records, and academic performance, and allowed students to view their grades online.

Semantic-VJEPa / SemVJEPa

Research Developer – Computer Vision & Representation Learning

- Researched on semantic-based masking for training video encoder models using the V-JEPa architecture.
- Built utilities for dataset manipulation, feature visualization, and interpretability workflows.

CERTIFICATIONS

- **Responsive Web Design Certification – freeCodeCamp**
<https://www.freecodecamp.org/certification/jhaunn/responsive-web-design>
